1. Overview

This document describes the format of the National Institute of Advanced Industrial Science and Technology (AIST) Advanced Land Observing Satellite (ALOS)/Phased Array type L-band Synthetic Aperture Radar (PALSAR) Interferometric Synthetic Aperture Radar (InSAR) product created from ALOS/PALSAR level 1.0 of the AIST.

Abbreviations used in this document are as follows.

| | |
|--------|--|
| AIST | National Institute of Advanced Industrial Science and Technology |
| ALOS | Advanced Land Observing Satellite |
| CEOS | Committee on Earth Observation Satellites |
| CF | Calibration Factor |
| DEM | Digital Elevation Model |
| DN | Digital Number |
| InSAR | Interferometric Synthetic Aperture Radar |
| JAXA | Japan Aerospace Exploration Agency |
| PALSAR | Phased Array type L-band Synthetic Aperture Radar |
| SLC | Single Look Complex |

2. Product specifications

2.1. Outline of the product

The AIST ALOS/PALSAR InSAR products are the data processed by SAR imaging, precise co-registration for all scenes in the same frame, InSAR analysis, and unwrapping regarding ALOS/PALSAR L1.0 whose polarizations are single (HH) and dual (HH, HV). The following software was utilized for each process:

- Sigma-SAR SAR Imaging, Precise Co-registration, InSAR analysis
- SNAPHU Unwrapping

The AIST ALOS/PALSAR InSAR product comprises 1) GeoTIFF files of SLC and InSAR images, 2) text files containing metadata, and 3) SLC CEOS files conforming to the Japan Aerospace Exploration Agency (JAXA) ALOS/PALSAR CEOS Level 1.1 format. Most GeoTIFF files are in the Cloud Optimized GeoTIFF format.

Table 2-1 shows the main specifications of ALOS/PALSAR used in this InSAR analysis. The product outline and the product type in each processing level are presented in Table 2-2 and Table 2-3, respectively. Also, Table 2-4 presents the pixel spacing of the products.

Table 2-1 ALOS/PALSAR specifications

| | | Fine mode (single-pol., dual-pol.) | |
|-------------------------------|--|------------------------------------|--------|
| Center frequency (wavelength) | | 1.27 GHz (0.2360571 m) | |
| Bandwidth | | 28 MHz | 14 MHz |
| Polarization | | HH | HH+HV |

Table 2-2 Outline of the InSAR product

| Processing level | Processing abbreviation | Outline of the product |
|------------------|-------------------------|---|
| 1.3 | RSLC | <p>These data are complex data compressed in range direction and azimuth direction with zero doppler frequency. The magnitude and phase information in slant range coordinates are contained.</p> <p>In the case of dual-polarization, the data are oversampled at the range direction sampling frequency of single-polarization.</p> <p>Also, the data are co-registered pixel by pixel to a single prime scene, a center scene regarding spatial and temporal in the frame. Both orbital and topographic fringes have been removed.</p> |
| 2.3 | GUNW | These data are processed from level 1.3 product by InSAR analysis, unwrapping, and orthorectified with a digital elevation model. |

Table 2-3 File type of the product

| Processing level | Filename | Description |
|------------------------|--------------------------------------|--|
| 1.3 | <i>SCENEID_RSLC_HH.tif</i> | Resampled SLC(GeoTIFF) |
| | <i>SCENEID_RSLC.txt</i> | Metadata |
| | <i>VOL-ALPSRP#####NNNN-H1.3_O</i> | Resampled SLC(CEOS) |
| | <i>LED-ALPSRP#####NNNN-H1.3_O</i> | #####: Orbit accumulation number of a scene center |
| | <i>IMG-HH-ALPSRP#####NNNN-H1.3_O</i> | NNNN: Frame number O: Orbit direction |
| 2.3 | <i>PAIRID_GUNW_dif.tif</i> | Interferograms |
| | <i>PAIRID_GUNW_dif_filt.tif</i> | |
| | <i>PAIRID_GUNW_unw.tif</i> | |
| | <i>PAIRID_GUNW_coh.tif</i> | Coherence |
| | <i>PAIRID_GUNW_mask.tif</i> | Mask |
| | <i>PAIRID_GUNW_hgt.tif</i> | Elevation and Line-of-Sight |
| | <i>PAIRID_GUNW_losN.tif</i> | |
| | <i>PAIRID_GUNW_losE.tif</i> | |
| | <i>PAIRID_GUNW_losU.tif</i> | |
| | <i>SCENEID_GUNW_amp.tif</i> | Backscatter amplitude |
| <i>PAIRID_GUNW.txt</i> | | Metadata |
| | <i>PPP_FFFF_OOO_GUNW.baselines</i> | Perpendicular baseline PPP: Path number FFFF: Frame number OOO: Off-nadir angle |
| | | |

※The definition of PAIRID and SCENEID are shown in Section 2.3.

Table 2-4 Pixel spacing of the product

| Processing level | Pixel spacing |
|------------------|---|
| 2.3 | 0.0003 degree ※ Azimuth: 8 looks, Range: 4 looks |

※Since level 1.3 is the product in slant range coordinates, the pixel spacing is not defined in ground range coordinates.

2.2. Differences from JAXA standard product

The differences between the AIST ALOS/PALSAR InSAR product (Level 1.3) and ALOS/PALSAR product (JAXA standard product Level 1.1) are listed below.

- i) Chirp replica signals before and after observations were not stored in ALOS/PALSAR level 1.0 of AIST. However, the following paper reports that the chirp rate is stable. The processing was performed using the average value of the chirp rates.

PALSAR Radiometric and Geometric Calibration, M. Shimada, O. Isoguchi, T. Tadono, K. Isono, IEEE Transactions on Geoscience and Remote Sensing, Vol. 47, No.12, pp.3915-3932, Dec. 2009.

- ii) Satellite positions and velocities in the inertial coordinates are stored in ALOS/PALSAR level 1.0 of AIST. Then, the data converted to the fixed earth coordinates by taking into account only the rotation of the Earth were utilized.
- iii) Since the cut-out position of the scene of the AIST product is not defined according to the JAXA standard product, the imaging ranges of the AIST product and the JAXA standard product in the scene unit may be different.
- iv) The AIST product consists of a dataset that is imaged at zero doppler frequency. In the case of dual-polarization, the data are oversampled at the range direction sampling frequency of single-polarization.
- v) The AIST product is co-registered to a single prime scene, a center scene regarding spatial and temporal in the frame. Both orbital and topographic fringes for the single prime are removed.

2.3. Filename

The filename of the AIST ALOS/PALSAR InSAR product follows the format shown below. Table 2-5 and Table 2-6 list scene ID and pair ID definitions, respectively. The processing abbreviation and image type definitions are listed in Table 2-7, Table 2-8, and Table 2-9.

➤ GeoTIFF file

| | |
|--|--|
| PairID_ProcessingAbbreviation_ImageType.tif | Interferograms, Coherence, Mask, Elevation, and Line-of-Sight |
| SceneID_ProcessingAbbreviation_ImageType.tif | Backscatter amplitude, Resampled SLC |

➤ Text file

| | |
|---|-------------------------------------|
| PairID_ProcessingAbbreviation.txt | Metadata of level 2.3 |
| PathNumber_FrameNumber_OffnadirAngle_ProcessingAbbreviation.baselines | Perpendicular baseline of level 2.3 |
| SceneID_ProcessingAbbreviation.txt | Metadata of level 1.3 |

➤ CEOS file

| | |
|-------------------------------|-------------------------------|
| VOL-JAXA SceneAndProductID | Volume directory file of RSLC |
| LED-JAXA SceneAndProductID | Leader file of RSLC |
| TRL-JAXA SceneAndProductID | Trailer file of RSLC |
| IMG-HH-JAXA SceneAndProductID | Image file of RSLC |

The GeoTIFF filename and the metadata filename definitions are listed in Table 2-7 and Table 2-8, respectively. Furthermore, Table 2-9 presents the CEOS filename definition.

Table 2-5 Scene ID definition

Image type: Horizontally polarized wave transmission/horizontally polarized wave receiving

2.4. Pixel value of GeoTIFF

Backscatter complex data I, Q (floating number) are stored in the resampled SLC. The formula below calculates the backscattering coefficient (unit: dB).

$$\sigma^0 = 10 \times \log_{10} \langle I^2 + Q^2 \rangle + CF - 32.0$$

In the backscatter amplitude image, digital number DN (i.e., integer number) is stored. The valid pixels have a value between 1 and 65535. Invalid pixels, such as that indicating an out-of-image range, have 0. The backscattering coefficient (unit: dB) is calculated below.

$$\sigma^0 = 10 \times \log_{10} \langle DN^2 \rangle + CF$$

These values are obtained with the ensemble average<>. The CF is a calibration factor included in the metadata file.

The coherence image stores values from 0 to 255 and can be divided by 255 to make it coherence (0.0 to 1.0).

The images of the wrapped interferogram, unwrapped interferogram, elevation, and line-of-sight contain real values, indicating the relevant numbers and whose units are radians for interferogram and meters for elevation. The line-of-sight is the vector from the satellite to the Earth's surface.

Table 2-10 lists the pixel values of the mask product.

Table 2-10 Mask definition

| Pixel value | Contents |
|-------------|--------------------------|
| 0 | Within the imaging range |
| 1 | Out of imaging range |
| 3 | Sea |
| 150 | Radar shadow |
| 255 | Layover |

3. Product formats

3.1. GeoTIFF file

The GeoTIFF file of the AIST ALOS/PALSAR InSAR product is a GeoTIFF format file. The byte order of the image data is little-endian. Note that the TIFF and GeoTIFF tags conform to TIFF Revision 6.0 and GeoTIFF Revision 1.0. The GeoTIFF files in level 2.3 are Cloud Optimized GeoTIFF format GeoTIFF files.

Table 3-1 presents the items for the TIFF tag. Table 3-2 and Table 3-3 present items for the GeoTIFF tag. The latitude mentioned in the table indicates the geodetic latitude.

Table 3-1 TIFF tags of the product

| No. | Tag Name | Tag Type | Description | Remark |
|-----|---------------------------|----------|---|--|
| 1 | ImageLength | LONG | Number of lines | |
| 2 | ImageWidth | LONG | Number of pixels in each line | |
| 3 | SampleFormat | SHORT | Data type of pixel L1.3 : 3 L2.3 : coh,mask,amp = 1 other = 3 | 1 = unsigned integer data 3 = IEEE floating point data |
| 4 | BitsPerSample | SHORT | Number of bits in each sample L1.3 : 32 L2.3 : coh,mask = 8 amp = 16 other = 32 | |
| 5 | Compression | SHORT | Compression type = 8 (Fixed) | 8 = COMPRESSION_ADOBE_DEFLATE |
| 6 | PhotometricInterpretation | SHORT | Colorspace type of pixel = 1 (Fixed) | 1 = Black is zero (Pixel value: Black = 0, White = (2^BitsPerSample-1)) |
| 7 | SamplesPerPixel | SHORT | Number of samples in each pixel L1.3 = 2 Other = 1 | |
| 8 | TileWidth | SHORT | Number of columns in each tile = 256 (Fixed) | |

3.2. Metadata file

The metadata file of the AIST ALOS/PALSAR InSAR product is a plain text file described in the format “keyword = value.”

Table 3-4 and Table 3-5 present items stored in the metadata file.

The string value is enclosed within the double quotation symbol (“”), whereas the numerical value is not enclosed. The latitude mentioned in the table indicates the geodetic latitude.

Table 3-4 Metadata information (Level 1.3)

3.3. Perpendicular baseline file

The perpendicular baseline file of the AIST ALOS/PALSAR InSAR product is a plain text file with each item separated by a space.

Table 3-6 lists items stored in the perpendicular baseline file.

Table 3-6 Items of the perpendicular baseline file

| No. | Item name | Remarks |
|-----|--|--------------|
| 1 | Sequential number | |
| 2 | Date of primary scene center | |
| 3 | Date of secondary scene center | |
| 4 | Perpendicular baseline of the secondary scene relative to the primary scene | =No.9 – No.8 |
| 5 | Day difference of the secondary scene relative to the primary scene | =No.7 – No.6 |
| 6 | Day difference of the primary scene relative to the single prime scene | |
| 7 | Day difference of the secondary scene relative to the single prime scene | |
| 8 | Perpendicular baseline of the primary scene relative to the single prime scene | |
| 9 | Perpendicular baseline of the secondary scene relative to the single prime scene | |

3.4. CEOS file

The AIST ALOS/PALSAR InSAR CEOS file is a binary file conforming to the JAXA ALOS/PALSAR CEOS Level 1.1 format.

The record structure of the CEOS file is shown in Table 3-7, and the format is presented in Table 3-9 through Table 3-21. The items whose definition differs from the JAXA CEOS format are marked with an X in the “Different from JAXA definition” column. Simultaneously, the orange hatching identifies the repeated items.

As explained in section 2.2, because this product is co-registered to a single prime scene in the frame, the orbit data of the single prime scene is stored in the CEOS file. In addition, both orbital and topographic fringes for the single prime scene are removed in SAR images. Even though these two points need to be noted, users can obtain the interferogram by taking only the phase difference without major modifications to their existing SAR processing software since this product is a CEOS file compliant with the JAXA format.

Table 3-7 CEOS file composition

| File/Record name | Record length | Record number |
|-------------------------------------|---------------|-------------------------------|
| a) Volume Directory File | | |
| 1) Volume descriptor record | 360 | 1 |
| 2) File pointer record | 360 | Number of SAR Image Files + 2 |
| 3) Text record | 360 | 1 |
| b) SAR Leader File | | |
| 1) File descriptor record | 720 | 1 |
| 2) Dataset summary record | 4096 | 1 |
| 3) Map projection data record | 1620 | 0 |
| 4) Platform position data record | 4680 | 1 |
| 5) Attitude data record | 8192 | 1 |
| 6) Radiometric data record | 9860 | 1 |
| 7) Data quality summary record | 1620 | 1 |
| 8) Calibration data record | 13212 | 0 |
| 9) Facility related record | Variable | 11 |
| c) SAR Image File | | |
| 1) File descriptor record | 720 | 1 |
| 2) Signal data record | Variable | Variable |
| 3) Processed data record | Variable | 0 |

| 63 | 469-476 | I8 | Facility data (4) record length = 'bbbbbbbb0' | | |
| 64 | 477-482 | I6 | Number of facility data (5) records = 'bbbbbb0' | | |
| 65 | 483-490 | I8 | Facility data (5) record length = 'bbbbbbbb0' | | |
| 66 | 491-496 | I6 | Number of facility data (6) records = 'bbbbbb0' | | |

Table 3-21(3/3) CEOS trailer file—file descriptor record

| Field No. | Byte No. | Type | Description | Remarks | Different from JAXA definition |
|-----------|----------|------|---|---------|--------------------------------|
| 67 | 497-504 | I8 | Facility data (6) record length = 'bbbbbbb0' | | |
| 68 | 505-510 | I6 | Number of facility data (7) records = 'bbbbbb0' | | |
| 69 | 511-518 | I8 | Facility data (7) record length = 'bbbbbbb0' | | |
| 70 | 519-524 | I6 | Number of facility data (8) records = 'bbbbbb0' | | |
| 71 | 525-532 | I8 | Facility data (8) record length = 'bbbbbbb0' | | |
| 72 | 533-538 | I6 | Number of facility data (9) records = 'bbbbbb0' | | |
| 73 | 539-546 | I8 | Facility data (9) record length = 'bbbbbbb0' | | |
| 74 | 547-552 | I6 | Number of facility data (10) records = 'bbbbbb0' | | |
| 75 | 553-560 | I8 | Facility data (10) record length = 'bbbbbbb0' | | |
| 76 | 561-566 | I6 | Number of facility data (11) records = 'bbbbbb0' | | |
| 77 | 567-574 | I8 | Facility data (11) record length = 'bbbbbbb0' | | |
| 78 | 575-580 | I6 | Number of low-resolution image data records = 0 | | X |
| 79 | 581-586 | I6 | Low-resolution image data record length = 0 | | X |
| 80 | 587-592 | I6 | Number of pixels of low-resolution image data = 0 | | X |
| 81 | 593-598 | I6 | Number of lines of low-resolution image data = 0 | | X |
| 82 | 599-604 | I6 | Number of bytes per one sample of low-resolution image data = 0 | | X |
| 83 | 605-720 | CH | Blanks | | |
